

Nature's Source® All Purpose Plant Food

Looking for beautiful garden success?

Nature's Source is the perfect sustainable choice.

Effective. Beautiful, full plants with vibrant color and beautiful BLOOMS.

Easy. Garden and Landscape feed – Just attach to the 32 oz. Ready-to-Spray jug to your water hose and feed.

Convenient. Container and Potted Plant feed – Just 3 pumps (or a capful) in your gallon watering can and feed.

Value. Nature's Source is a concentrated liquid - a little goes a long way. The hose-end sprayer feeds over 5,000 sq. ft. of landscape/gardens.

Sustainable. Made with oilseed extract, a renewable source of plant nutrition which contains amino acids and the organic compounds nature puts into a seed for ideal plant development. The key to overall plant development! Feeds the plant and the soil for a healthy growing environment of beneficial microorganisms which promote strong root development. Plus, this sustainable alternative is **GMO-Free!**

NATURE'S
SOURCE®

Bring out the best in everything you grow.

Nutrition from Seeds

INFORMATIONAL GUIDE

Nature's Source All Purpose Plant Food starts with nutrition from oilseeds, which contain essential nutrients, vitamins and amino acids, for optimum plant growth, enhanced color, and increased yields.

This formulation makes it safe* and gentle for feeding all your plants with just one formulation. This includes tender, delicate plants that can be sensitive to fertilizers. *When used as directed, will not burn your plants.

Whether you want more flowers with vibrant color or more blooms on your fruits and vegetables – Nature's Source provides a great source of nutrition.

USAGE TIPS

Always make a fresh solution each time you feed.

Potted Plants/Patio Plants:

- Be sure you start with a good growing media that provides optimum air space, drainage and water-holding capacity. Water in when repotting with Nature's Source at 1 TBL (15 ML) per gallon (3.7 L) of water. Once established, they can be watered at this rate with a watering can or with the convenient hose-end sprayer for easy application of feed and water. Feed every 7-10 days for optimum plant quality and beautiful blooms.

House Plants:

- Typically, houseplants are light feeders and 1 tsp (5 ML) per gallon (3.7 L) of water is the optimum rate. Houseplants can be fed every time you water, since watering is less frequent for indoor plants.

YOUR LANDSCAPE

New Plantings:

- The Nature's Source Ready-to-Spray Hose-end Sprayer makes it easy to feed. Just attach to your water hose, turn the water ON and when you are ready to water in your plants, push the lever down and turn the sprayer to ON. Water your plants in thoroughly, 8-10 seconds per plant. (This depends on the planting bed quality. If soil is amended with peat moss and organic matter and takes in water easily, feed/water time will be less.)
- Water/feed as needed to establish the plants in your landscape based on your weather conditions.

ESTABLISHED / EXISTING LANDSCAPES

Homeowners without an irrigation system

- Feed with the Nature's Source hose-end sprayer every 7 to 10 days depending on the results you are looking for. You can feed as often as twice a week for more vigorous growth.

For homeowners with irrigation systems

- The irrigation system applies adequate water for your plants, but the plants still need nutrients. Apply Nature's Source to the foliage with the Nature's Source hose-end sprayer for 3-5 seconds per plant.
- Foliar applications are also ideal when the weather is too wet to root-feed your plants. A 1-2 second spray will provide nutrition without adding to the water at the root zone.
- This same application is ideal for your vegetable garden.
