Feeds the plant and the soil for a healthy growing environment of beneficial microorganisms which promote strong root development. Plus, this sustainable alternative is GMO-Free and Vegan Friendly.

NATURE'S
SOURCE®

Bring out the best in everything you grow.

Nutrition from Seeds

INFORMATIONAL GUIDE

Nature's Source Tomato & Vegetable Plant Food starts with nutrition from oilseeds, which contain essential nutrients, vitamins and amino acids, for optimum plant growth, enhanced color, and increased yields.

This formulation makes it safe* and gentle for feeding all your plants with just one formulation. This includes tender, delicate plants that can be sensitive to fertilizers. *When used as directed, will not burn your plants.

Whether you want more blooms or better taste – Nature's Source provides a great source of nutrition.

USAGE TIPS

Always make a fresh solution each time you feed.

Seed Start Kits:

- Plant seeds in a well drained soil and water in with Nature's Source Tomato & Vegetable Plant Food at one pump (1 tsp/5 ml) per quart (0.9 L) of Water. Do not over water, but don't let media completely dry out. As soon as the seed germinates continue feeding once a week with 2 pumps (10 ml) per quart (0.9 L) of water.

Patio Container Gardens and Herbs:

- Be sure you start with a good growing media that provides optimum air space, drainage and water-holding capacity. Water in when repotting with Nature's Source Tomato & Vegetable Plant Food at 3 pumps (1 Tbsp./15 ML) per gallon (3.7 L) of water. Feed every 7-10 days for optimum plant quality and increased blooms/yield. If you soil stays to wet to feed your plants due to weather conditions, mix at above rate in a quart spray bottle and spray the foliage. This will give your crops the nutrition they need without putting addition moisture into an already wet growing media.

Vegetable Gardens and Raised Bed:

- Nature's Source Tomato and Vegetable Plant Food can be mixed into your gardening watering can at the above rate of 3 pumps per gallon of water and fed every 7 to 14 day. Many consumers report feeding 2 times a week for increased yield.
