

The Nature's Source Difference: Nature's Source plant foods are high efficiency nutrition formulated with oilseed extract, an all-natural and renewable source of plant nutrition. The low salt formulations enhance nutrient uptake by the plant.

Feeding Guidelines

Foliar Spray Guidelines

Foliar Application is recommended at a rate of once per week during the growth cycle for optimum results for crops. Nature's Source Organic® Plant Food 3-1-1 can be mixed and applied with other pre-diluted chemical sprays*, excluding copper and heavy metal based products.

Nutrition Guidelines per Growth Cycle

Stage 1 – First 2 weeks

A weekly Organic 3-1-1 foliar application at the rate of 32 oz. (1 L) per 50-gallon (200 L) tank per acre will enhance nutrient efficiencies.

Stages 2-11 – Visible Swelling of buds through Most Flowers on the bush have opened

Apply the Organic 3-1-1 foliar application at a rate of 64 oz. (2 L) per 50-gallon (200 L) tank.

Stages 12-14 – Corolla tubes are falling off the flowers revealing small green fruit.

Increase the drip application to 16 gallons per acre twice a week and continue the weekly foliar application at 64 oz. (2 L) per 50-gallon (200 L) tank.

Stages 15-16 – During fruit coloring and harvest

Reduce the Organic 3-1-1 foliar application rate of 32 oz. (1 L) per 50-gallon (200 L) tank.

Stages 17+ – First bud set for next year and growth until leaves fall

Increase Organic 3-1-1 foliar spray weekly back to 64 oz. (2 L) per 50-gallon (200 L) tank. This will enhance the stored nutrition for optimum production the following year. As the leaves have changed color, feeding can be stopped for the year.

**A jar test is always recommended before mixing any chemicals.*
