

Grow Program: Fall Pansy

The Nature's Source Difference: Nature's Source plant foods are high efficiency nutrition formulated with oilseed extract, an all-natural and renewable source of plant nutrition. The low salt formulations enhances nutrient uptake by the plant.

Feeding Recommendations

Occasional Feed Program:

Beginning from day of transplanting, feed with Nature's Source 10-4-3 or 10-4-5 two to three times per week at 250 ppm.

Nature's Source Foliar Essentials can be applied starting in propagation and on through the growing cycle of the crop. This application encourages a more compact growth habit with increased tone and enhanced nutrient uptake. Apply at a rate of 1 gallon per 100 gallons of water (1 oz. per gallon) every 7-10 days, as needed.

For Growers who prefer Constant Feed: Feed Nature's Source 10-4-3 or 10-4-5 at 200 ppm.

Nature's Source Benefits: Fall Pansies grown with Nature's Source will be full of energy and nutrition without salt stress for improved transplant success.

Many Growers Report more toned, compact plants without the additional foliar sprinch. They also see the plant cover the soil quicker. Plus larger, more colorful blooms, with dark green foliage for earlier – ready to market.

We recommend Nature's Source® Plant Probiotic be added to the watering in process for root protection and soil enhancement. The application rate is ¼ lb. per 50 gallons.
